

## Pet Photography

Jolanda Boekhout | Master Supply List

To prepare for Jolanda's class, please gather the following:

- digital SLR camera.\*
- external flash (optional).
- props (optional).
  - pieces of cloth or paper for backdrop (black / white)
  - pieces of foam board
- stuff to attract and hold your pet's attention, for example:
  - feathers
  - squeaking rubber duckie
  - treats

\* A DSLR is suggested for this class because to really capture a pet's movement, you need a fast shutter speed. Most point and shoot cameras are semi-automatic and have something called 'shutter lag'. This means that there is a delay between the moment of triggering the shutter and when the photo is actually recorded (when the button is pressed and when the photo is taken). Keep in mind that it isn't impossible to achieve good results with a point and shoot camera, but it will take more effort.
